

Product Name:

LumiZone

Intimate Pigment Corrector

Product Effects:

Formulated specifically for delicate, high-friction areas including the axillary (underarm) regions, inner thighs, and external intimate zones. This advanced, oil-free clinical gel features a precision-calibrated multi-pathway active matrix designed to aggressively target localized hyperpigmentation. By combining targeted alpha hydroxy acids (AHAs) for gentle micro-desquamation with a powerful cocktail of tyrosinase inhibitors, it interrupts melanin production at multiple cellular stages. The fast-absorbing, non-sticky formula effectively clears hyperkeratotic build-up while meticulously respecting and protecting the fragile epidermal barrier of sensitive areas.

Benefits on Skin

- **Multi-Stage Melanogenesis Inhibition:** Synthesizes high-dose Tranexamic Acid, Alpha Arbutin, and Kojic Acid to aggressively halt tyrosinase activation, fading stubborn friction-induced dark patches and hormonal hyperpigmentation.
- **Targeted Epidermal Stratum Renewal:** Utilizes an ultra-mild blend of Glycolic and Lactic Acids to gently dissolve cohesive dead cells in thick, friction-dense areas, smoothing texture and revealing a lighter skin tone.
- **Post-Inflammatory Hyperpigmentation (PIH) Resolution:** Effectively targets and diminishes skin darkening caused by razor burn, epilation, waxing, or friction micro-inflammation in body folds.
- **Antioxidant Shielding & Radiance:** Ascorbyl Glucoside (AA2G) paired with Licorice Root Extract delivers continuous radical-scavenging action, preventing surface lipid oxidation and visual dullness.
- **Meticulous Barrier Protection & Calming:** Enriched with D-Panthenol (B5) and Allantoin to instantly pacify the delicate epidermis, minimizing the risk of vascular erythema or irritation during the active brightening cycle.

Indications

- Localized hyperpigmentation, visual dullness, and dark patches in the axillary (underarms) and inguinal (bikini/intimate) regions.
- Friction-induced skin darkening on the inner thighs, pelvic folds, and bra-line areas.
- Post-inflammatory hyperpigmentation (PIH) arising from hair removal, ingrown hairs, or skin-on-skin friction.
- Thickened, tactilely rough epidermal texture (localized hyperkeratosis) in sensitive physiological folds.

Directions for Use

To ensure optimal safety and maximum compound delivery, always adhere to the following precise application protocol:

1. **Preparation:** Begin with a thoroughly cleansed and 100% dry skin surface. Ensure the target area is completely free of residual moisture, deodorants, or body lotions.
2. **Application:** Dispense a small, pea-sized amount of the gel onto clean fingertips. Apply a thin, uniform layer strictly over the hyperpigmented zones of the underarms or external intimate areas.
3. **Absorption:** Massage gently using mild circular motions until the product is entirely absorbed. Allow the gel to flash-dry completely (approximately 60 seconds) before dressing. Its clean, clinical finish ensures zero residue or stain transfer to fabrics.

Recommendation

- * **Initial Phase (Weeks 1–2):** Apply every other evening strictly within your nighttime routine to monitor epidermal tolerance.
- * **Maintenance Phase (Week 3 onwards):** If no irritation occurs, increase application to once daily every evening for accelerated cellular turnover and pigment clearance.
- * **Clinical Synergy:** For maximum barrier support, wait 15 minutes post-application and follow up with a professional, fragrance-free physiological moisturizer to lock in hydration.

Safety

- * **External Use Only:** Strictly indicated for external topical application. Do not apply directly to internal mucous membranes, open wounds, or freshly shaven/irritated skin.
- * **Patch Test Mandatory:** Conduct a localized patch test on the inner forearm 24 hours prior to first intimate application. Discontinue use immediately if persistent redness or burning occurs.
- * Store in a cool, dry place, strictly away from direct sunlight, moisture, or high-temperature environments. Keep the container tightly sealed after each use.
- * Keep out of reach of children.
